## EDUCATION

**Zhejiang Wanli University**                                                                                          Ningbo, China
*Information and Computing Science, Bachelor's degree*                                                          2011 - 2015

## WORK EXPERIENCE

**iHerb**                                                                                                               Shanghai, China
*Cart - Sr. Frontend Engineer*                                                                                   July 2019 – present

- Mainly worked on the Cart project which handled a daily average of 182k page views.
- Worked as a core developer in the migration of the Cart project from ASP.NET MVC to Next.js.
- Delivered multiple valuable features like Autoship and Save, Product Recommendation, Order Receipt, etc.
- Refactored the Okta grant flow on the promo project, transforming from backend mode to the React SPA mode.
- Set up development tools like ESLint, Prettier, Jest, SonarCloud, and CI jobs to enforce the code quality.
- Created and maintained the company-wide shared library that was used by eight teams.
- Built React UI components using Storybook and Emotion.
- Created a library monorepo by using npm Workspace, Figma, SVGR, Lerna, tsup and Bitbucket pipeline.
- Experienced in data tracking tools Google Tag Manager and New Relic.
- Implemented the feature toggle functionality using LaunchDarkly.
- Worked closely with PO, QA, and Backends. Had well experienced in communication with overseas colleagues.
- Interviewed the candidates and mentored the new teammate.

**Mary Kay China**                                                                                                      Shanghai, China
*IT Department - Frontend Engineer*                                                                          June 2017 – July 2019

- Built a WeChat Mini program for beauty consultants to learn about the company's business and products via video.
- Developed the WeChat campaign page using Egg.js/Vue.js, including WeChat authorization and sharing.
- Integrated the SecureAuth for single sign-on on CMS project.
- Maintained and Developed the Native APP using Lua and XML.

**Shanghai Shitu Information Technology**                                                                        Shanghai, China
*IT Department - Frontend Engineer*                                                                     February 2016 – June 2017

- Created a Bootstrap-like UI library that was used on several backend management systems.
- Developed jQuery-based business function plugins, like Image Uploader, and City Selector.
- Delivered multiple official company website developments.
